CS100-Solving Business Problems with Information Technology

LEARN THE TECH SKILLS NEEDED TO SUCCEED IN BUSINESS

- Learn essential technology skills such as computer concepts and Advanced Excel.

- Use business applications to communicate and collaborate within teams.

- Format, analyze, and present data using Excel.

- Learn basic programming in either Python or HTML.

- Synch data and devices with the cloud technology while utilizing file management techniques.

- Stay current on technology trends such as Cybersecurity, Artificial Intelligence, Virtual Reality, and Data Analytics.

Service Learning Option

Participate in a community service learning project as part of the course as a 4th credit option where you can apply your tech skills and help your community.
You will hear about it the first week of your course.
