

Information Systems Audit and Control Degree Faculty

Kerri-Ann Sanderson

Assistant Professor, Accountancy

What do you teach?

I teach Accounting Information Systems which prepares students to critically analyze business processes with a keen emphasis on risk identification and information control implications.

Why do you like teaching at Bentley?

Bentley offers a nurturing environment that provides students with a state-of-the-art education. Students are encouraged to question the status-quo and seek novel approaches to problem resolution. I appreciate that Bentley students boldly embrace the challenge to not only excel as individuals but also as a collective body embarking on an uncharted journey. It is also wonderful to collaborate with faculty who are thought-leaders and practice experts in their fields, and who are deeply committed to teaching excellence.

What is your teaching style?

To facilitate a dynamic learning environment, I use a variety of techniques to deliver course material. I conduct interactive lectures and engage in thought-provoking discussions about the relevant information system principles and accounting applications. I use real-world examples from recent news stories, multimedia presentations as well as hands-on problem solving business projects to illustrate concepts. Throughout these exchanges, I continually challenge my students to not only understand the “what” regarding the design and implementation of internal controls but to also think critically about the “why.”

What advice would you offer a new Bentley student?

I encourage students to be intellectually curious, open-minded, and confident in the value they bring to the table. The capacity for greatness lies within all of us. The key is to unlock that “thing” that excites and ignites your passion then relentlessly pursue it with honesty and integrity. And in all of this, be kind, patient, and compassionate to those with whom you interact directly and indirectly.
