# Charting AI Ethics: The Path to Virtuous Augmented Organizations

Thursday, November 9th, 12:30 P.M. – 1:45 P.M.

Register for Zoom | In person location: AAC 120.
*For in person attendance, RSVP to gsands@bentley.edu*

Artificial intelligence (AI) is a transformative force reshaping industries and societies worldwide. However, along with its increasing impact, AI brings forth profound ethical challenges. This talk undertakes a comprehensive exploration of the ethical landscape within the domain of AI and its significant implications for moral development within organizations.

Our exploration begins with a fundamental inquiry: what fuels the AI ethics debate, and what are the key themes addressed? Through a systematic literature review, we delve into the ethical concerns and innovative solutions that address them. Our investigation takes a deeper turn as we examine the consequence of integrating AI into organizational workflows, particularly within augmented organizations -- those at the forefront of AI implementation. We scrutinize the role of augmented teams in fostering virtue development and emphasize the necessity for practical wisdom in decision-making. This inquiry paves the way for further research in the realm of AI-augmented organizational dynamics.
